

# Tokenomics

Total Supply: 1 Billion \$GPT

- Advisors: 5% (50 Million Tokens)
- Pre-Sale: 5% (50 Million Tokens)
- Private Sale: 5% (50 Million Tokens)
- Public Sale: 5% (50 Million Tokens)
- Team:
  - Total: 15% (150 Million Tokens)
  - 4-Year Daily Vesting w/ 6 month cliff
- Ecosystem: 5% (50 Million Tokens)
- Treasury: 5% (50 Million Tokens)
- Partnerships:
  - Total: 5% (50 Million Tokens)
  - 1-Year Linear Vesting
- Rewards:
  - Total: 50% (500 Million Tokens)
  - AI Training: 50 Million Tokens
  - Staking: 150 Million Tokens
  - Mining: 300 Million Tokens
    - Internal Mining Cap: 100 Million Tokens

The \$GPT token and GPT Protocol are designed to ensure price stability and long-term value. Using automated algorithms, the system dynamically balances inflation and deflation by adjusting the token burn rate and issuance based on community governance and market conditions. Additionally, 50% of revenue from consumer-facing applications is allocated to buy back tokens, with half of these being burnt to reduce supply and the other half recycled into the rewards fund. This strategy not only stabilizes the token price but also promotes user engagement and adoption, making the \$GPT token a reliable store of value and securing the protocol's long-term incentivization and computational capabilities.
